You take this course because you have to, but then you realize it completely changes the way you will teach in the future.

Teachers will understand the benefit of students creating an Independent Display of Learning instead of "just another" project by differentiating what each student should accomplish through the learning process. This course's foundation is built on problems we have witnessed or experienced in our own distance learning courses and many hours in classrooms and working with educators.

Q&A

Where do I house the learning?

How do I engage my students online?

How do I maintain a personal connection with my students?

How do I meet individual learners' needs?

How do I hold my students accountable?

This online course is designed to...

1. Help teachers understand how to translate constructivist (hands on, active) learning experiences to an online platform using free tools.
2. Provide templates for hands-on learning activities that teachers can copy and use to speed up the learning curve so that they can produce better quality assignments more quickly.
3. Provide videos teachers can send directly to students with their assignments to give students the technical information they will need to complete the work teachers are providing.
4. Help teachers understand what we call the "Independent Display of Learning" concept (IDL), which will help them create learning experiences that are both hands on and assure students master performance standards.
5. Help teachers with an extensive menu of options for creating hands-on work that will eliminate the repetitive "drill and kill" nature of most online learning experiences.

Campus or District cohort courses are available to schools purchasing at least 30 seats so that school or district administrators can log in as instructors to monitor progress and completion.
